

With the globe warming up, guess I'd better...

### ***Turn Down the Heat!***

I'm going to do it by—

- ◆getting out of my car, since every mile I drive puts a pound of CO2 into the atmosphere—and kills .0001 squirrels and other small furry critters
- ◆cutting down on shower time—half as long can save 400 pounds of CO2/yr
- ◆consuming less stuff—especially imported items (an ocean freighter pollutes as much in a mile as a car driving around the world!!)
- ◆eating smart (local & organic; more-grain-and-less-beef=less methane)
- ◆less energy (one compact florescent bulb can save 40 pounds CO2/yr; using the dryer=50 pounds CO2/yr)
- ◆using less paper (making a pound requires 3 pounds CO2) and helping save forests (NCP—If a Tree *Falls*...)
- ◆remembering we have one Earth—and 25 percent of living creatures are threatened by global warming, as are millions of the world's people—and I can do small and large things daily to keep it cool!
